SUMMARY

Backend-leaning full-stack engineer with four years of experience building and operating Node.js and Python services in production. Comfortable owning a feature from schema design through rollout and on-call. Particular interest in data pipelines, observability, and making slow systems measurably faster.

EXPERIENCE

Software Engineer II March 2023 – Present

Kestrel Logistics Group — Sacramento, CA

- Rebuilt the shipment-tracking ingestion service in TypeScript on Node.js, cutting median event processing latency from 840 ms to 190 ms and reducing dropped events by 94%.
- Designed the partitioning and retention strategy for a 40-million-row PostgreSQL events table, which held query times under 200 ms as volume tripled over eighteen months.
- Introduced contract tests between the dispatch API and three internal consumers, removing the class of breakage that had caused six production incidents in 2022.
- Mentored two junior engineers through their first on-call rotations and wrote the runbooks the team still uses for ingestion paging alerts.

Software Engineer I July 2021 – February 2023

Northgate Analytics — Remote

- Built the customer-facing reporting API (Python, FastAPI, PostgreSQL) used by roughly 1,200 daily active accounts at time of departure.
- Cut the nightly aggregation job from 3 hours 10 minutes to 26 minutes by replacing row-by-row processing with set-based SQL and a materialized rollup table.
- Added structured logging and tracing across eight services, which brought median incident diagnosis time down from about 45 minutes to under 12.

Software Engineering Intern May 2020 – August 2020

Willowmere Civic Tech — Sacramento, CA

- Implemented an accessible address-lookup component used across four public benefit forms.
- Wrote the first automated test suite for the intake application, reaching 71% line coverage.

EDUCATION

B.S. Computer Science 2017 – 2021

Bellwater State University — Bellwater, CA

- Minor in Statistics. GPA 3.6. Teaching assistant for Data Structures, three semesters.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Go (working knowledge), Bash

Frameworks: Node.js, React, Next.js, FastAPI, Express, Vitest, pytest

Data: PostgreSQL, Redis, Kafka, dbt, Snowflake

Infrastructure: Docker, Terraform, AWS (ECS, RDS, S3, Lambda), GitHub Actions, Grafana, OpenTelemetry

PROJECTS

Tideline — github.com/dwreyes-dev/tideline

An open-source CLI that replays PostgreSQL write-ahead log segments into a local test database so engineers can reproduce production data shapes without copying customer data. Roughly 900 stars; used in the CI pipeline at two companies that have written in.

Slowhand — github.com/dwreyes-dev/slowhand

A small profiling wrapper for Node.js HTTP handlers that attributes latency to individual awaits. Written up on my blog at danareyes.example.dev/slowhand.
