PostgreSQL · MySQL · Redis · RabbitMQ · Docker · Kubernetes · GCP · Datadog · CircleCI

EDUCATION

B.S. Software Engineering
Rennick Institute of Technology
2018 – 2022 · Providence, RI
Senior capstone: distributed rate limiting. GPA 3.71.

Certificate, Cloud Architecture
Rennick Professional Studies
2023

SUMMARY

Software engineer with three and a half years of experience shipping customer-facing web products and the services behind them. Strongest on the seam between the API and the browser: schema design, caching, and the kind of front-end performance work that shows up in real user metrics. Looking for a mid-level role on a team that takes testing seriously.

EXPERIENCE

Software Engineer — January 2024 – Present
Tidewater Systems — Providence, RI

- Own the billing-events service (Kotlin, Spring Boot, PostgreSQL) that reconciles about 2.4 million usage records per day against the invoicing ledger.
- Eliminated a long-standing double-charge bug by moving reconciliation onto idempotency keys, which cut billing support tickets by 61% quarter over quarter.
- Led the migration of 14 services from CircleCI to a self-hosted runner pool, taking the median pipeline from 11 minutes to 4 minutes 20 seconds and cutting CI spend by $3,100 per month.
- Wrote the team's Playwright end-to-end suite covering the seven highest-traffic flows; it now gates every deploy to production.

Associate Software Engineer — August 2022 – December 2023
Blue Harbor Media — Boston, MA

- Built the subscriber paywall front end in React and Next.js, serving roughly 310,000 monthly unique readers.
- Improved Largest Contentful Paint on article pages from 4.1 s to 1.8 s by deferring third-party embeds and moving hero images to responsive AVIF, which lifted measured article completion rate by 9%.
- Added a Redis-backed edge cache for the article API, dropping origin load by about 70% during traffic spikes tied to breaking news.
- Ran the accessibility audit that brought the reader app to WCAG 2.1 AA on all templates.

Engineering Intern — June 2021 – August 2021
Fernhollow Robotics — Worcester, MA

- Wrote the telemetry dashboard used by the field-test team to review autonomous runs.
- Reduced log ingestion storage by 38% by switching to columnar Parquet with daily compaction.

INTERESTS

Competitive rowing, letterpress printing, and maintaining a small Mastodon instance for a local makerspace.

PROJECTS

Harborlight
github.com/moyelaran/harborlight
A self-hostable status page that derives incident timelines from existing alerting webhooks instead of asking engineers to write updates by hand. About 1,400 stars.

quiettype
github.com/moyelaran/quiettype
A TypeScript codemod that finds and narrows implicit *any* in large codebases, written up at oyelaran.example.dev/posts/quiettype.
